WARNING: Rated capacity of the truck/attachment combination is a responsibility of the original truck manufacturer and may be less than shown on the attachment nameplate. Consult the truck nameplate.

WARNING: Do not operate this attachment unless you are a **trained and authorized** lift truck driver.

INTRODUCTION

This guide contains operating instructions for **cascade®** 35E/45E Load Push/Pulls. It will help avoid common errors which often cause damage to the equipment or loads being handled.

Read this manual thoroughly before operating the attachment. Be sure you know and understand all operating procedures and safety precautions. If you have any questions or don't understand a procedure ask your supervisor.

Emphasize Safety! Most accidents are caused by operator carelessness or misjudgement. You must watch for hazardous situations and correct them.

S SAFETY RULES

No riders

No reach through mast

No standing under load

PP0125.eps

PP0383.eps

TRAFFIC

DAILY INSPECTION

Check items each day. Report problems to your supervisor. See Service Manual 686455 for maintenance and repair procedures.

ATTACHMENT OPERATION

SOLENOID EQUIPPED ATTACHMENTS

PUSH/PULL

LOAD PUSH

- A Sideshift left
- A Faceplate push (press button 1)
- A Position platens-out (press button 2)
- B Sideshift right
- B Faceplate retract/pull (press button 1)
- B Position platens-in (press button 2)
- C Not used
- D Not used

PUSH/PULL WITH SIDESHIFT

- A Sideshift left
- B Sideshift right
- C Faceplate push
- D Faceplate retract/pull

PUSH/PULL WITH SHEET-SAV®

- A Sideshift left
- B Sideshift right
- C Faceplate push
- C Sheet-Sav®-lift (press button)
- D Faceplate retract/pull
- D Sheet-Sav®-retain (press button)

PUSH/PULL

LOAD PUSH

- A Faceplate push
- B Faceplate retract/pull
- C Not used
- D Not used

SEQUENCE VALVE EQUIPPED ATTACHMENTS

- A Sideshift left
- A Position platens-out (after complete sideshift left)
- B Sideshift right
- B Position platens-in (after complete sideshift right)
- C Faceplate Push
- D Faceplate Retract

WARNING: Truck control handle and attachment function activation shown here conforms to ASME/ANSI B56.1 recommended practices. Failure to follow these practices may lead to serious bodily injury or property damage. End user, dealer and OEMs should review any deviation from the practices for safe operation.

S LIPSHEET LOADS

Nonskid coating recommended

Stack behind fold

Transport

Banding OR Stretchwrap

PP0129.eps

Tilt

Unitized loads

Loads with Torn Slipsheet Tab

2 Wedge both tips under slipsheet. Drive forward.

3 Position load 6 in. over new slipsheet. Lower platen onto slipsheet.

4 Push off load. Position 1/4 in. behind fold.

UNLOADING ON STACKS

UNLOADING ON PALLETS

Pallet Boards in line with Push Direction

UNLOADING ON PALLETS

Pallet Boards Opposite Push Direction

UNLOADING INTO TRUCK TRAILERS

CAUTION: Level trailer with dock. Watch for nails or screws on trailer floor and walls.

CAUTION: Trailer wheels must be blocked

SHEET-SAV® OPERATION

- 1** Pull load
OPTIONAL: Pull and drive forward

- 2** Raise Sheet-SavT foot.
Sheet tab positions
under foot

- 3** Lower Sheet-Sav™ foot.

PP0139.eps

ATTACHMENT REMOVAL QFM™ (Quick Fork Mount) Attachments

- 1** Extend faceplate and raise

- 2** Turn down lower hooks

PP0140.eps

- 3** Quick
disconnect
couplers

- 4** Back away

ATTACHMENT INSTALLATION

QFM™ (Quick Fork Mount) Attachments

2 A Drive forks under attachment
B Engage upper forks

3 A Turn up lower hooks
B Adjust hook clearance and tighten

PP0141.eps

PLATEN ADJUSTMENT

Dedicated Attachments

QFM™ (Quick Fork Mount) Attachments

FACEPLATE STOP ADJUSTMENT

Attachments equipped with faceplate stop option

SAFE OPERATION AND MAINTENANCE

OSHA Regulations – Industrial Trucks and Attachments (Specific Regulations from OSHA 1910.178)

WARNING: The safe operation and maintenance of industrial trucks is regulated by Occupational Safety and Health (OSHA) regulations 1910.178 and American National Standards Institute (ANSI) Safety Standard for Powered Industrial Trucks, ANSI B56.1. When operating and maintaining industrial trucks equipped with attachments you should pay particular attention to the following sections of these regulations. You should be familiar with **all** sections of these regulations. **Ask your employer for the complete regulations.**

(a) General Requirement

- (4) Modifications and additions which affect capacity and safe operation shall not be performed by the customer or user without manufacturer's prior written approval. Capacity, operation and maintenance instruction plates, tags or decals shall be changed accordingly.
- (5) If the truck is equipped with front-end attachments other than factory installed attachments, the user shall request that the truck be marked to identify the attachments and show the appropriate weight of the truck and attachment combination at maximum elevation with load laterally centered.
- (6) The user shall see that all nameplates and markings are in place and maintained in a legible condition.

(e) Safety Guards

- (2) If the type of load presents a hazard, the user shall equip fork trucks with a vertical load backrest extension in accordance with (a)(2) following.
 - (a)(2) All new powered industrial trucks acquired and used by an employer after February 15, 1972 shall meet the design and construction requirements for powered industrial trucks established in the "American National Standard for Powered Industrial Trucks, ANSI B56.1", except for vehicles intended primarily for earth moving or over-the-road hauling.

(l) Operator Training

Only trained and authorized operators shall be permitted to operate a powered industrial truck. Methods shall be devised to train operators in the safe operation of powered industrial trucks.

(m) Truck Operations

- (1) Trucks shall not be driven up to anyone standing in front of a bench or other fixed object.
- (2) No person shall be allowed to stand or pass under the elevated portion of any truck, whether loaded or empty.
- (3) Unauthorized personnel shall not be permitted to ride on powered industrial trucks. A safe place to ride shall be provided where riding of trucks is authorized.
- (4) The employer shall prohibit arms or legs from being placed between the uprights of the mast or outside the running lines of the truck.
- (5i) When a powered industrial truck is left unattended, load engaging means shall be fully lowered, controls shall be neutralized, power shall be shut off and brakes set. Wheels shall be blocked if the truck is parked on an incline.
- (5ii) A powered industrial truck is unattended when the operator is 25 feet or more away from the vehicle which remains in his view, or whenever the operator leaves the vehicle and it is not in his view.
- (5iii) When the operator of an industrial truck is dismounted and within 25 feet of the truck still in his view, the load engaging means shall be fully lowered, controls neutralized and the brakes set to prevent movement.

- (6) A safe distance shall be maintained from the edge of ramps or platforms while on any elevated dock or platform or freight car. Trucks shall not be used for opening or closing freight doors.
- (10) A load backrest extension shall be used whenever necessary to minimize the possibility of the load or part of it from falling rearward.

(n) Traveling

- (4) The driver shall be required to slow down and sound the horn at cross isles and other locations where vision is obstructed. If the load being carried obstructs forward view, the driver shall be required to travel with the load trailing.
- (7i) When ascending or descending grades in excess of 10 percent, loaded trucks shall be driven with the load upgrade.
- (7iii) On all grades the load and load engaging means shall be tilted back if applicable, and raised only as far as necessary to clear the road surface.

(o) Loading

- (1) Only stable or safely arranged loads shall be handled. Caution shall be exercised when handling off-center loads which cannot be centered.
- (2) Only loads within the rated capacity of the truck shall be handled.
- (3) The long or high (including multiple-tiered) loads which may affect capacity shall be adjusted.
- (4) Trucks equipped with attachments shall be operated as partially loaded trucks when not handling a load.
- (5) A load engaging means shall be placed under the load as far as possible; the mast shall be carefully tilted backward to stabilize the load.
- (6) Extreme care shall be used when tilting the load forward or backward, particularly when high tiering. Tilting forward with load engaging means elevated shall be prohibited except to pick up a load. An elevated load shall not be tilted forward except when the load is in a deposit position over a rack or stack. When stacking or tiering, only enough backward tilt to stabilize the load shall be used.

(p) Operation of the Truck

- (1) If at any time a powered industrial truck is found to be in need of repair, defective, or in any way unsafe, the truck shall be taken out of service until it has been restored to safe operating condition.

(q) Maintenance of Industrial Trucks

- (1) Any power-operated industrial truck not in safe operating condition shall be removed from service. All repairs shall be made by authorized personnel.
- (5) All parts of any such industrial truck requiring replacement shall be replaced only by parts equivalent as to safety with those used in the original design.
- (6) Industrial trucks shall not be altered so that the relative positions of the various parts are different from what they were when originally received from the manufacturer, nor shall they be altered either by the addition of extra parts not provided by the manufacturer or by the elimination of any parts. Additional counter-weighting of fork trucks shall not be done unless approved by the truck manufacturer.
- (7) Industrial trucks shall be examined before being placed in service and shall not be placed in service if the examination shows any condition adversely affecting the safety of the vehicle. Such examinations shall be made at least daily. When industrial trucks are used on a round-the-clock basis, they shall be examined after each shift. Defects when found shall be immediately reported and corrected.
